EXPECTING EOL:
A COMPREHENSIVE GUIDE TO EOL AND EOSL BEST PRACTICES AND DEADLINES

WHEN EOL HAPPENS, EOSL FOLLOWS.

But you just bought a new line of hardware. Why should you be thinking about End of Life or End of Service Life so soon after your purchase?

While you don't need to immediately plan an exit strategy for those brand-new units, you certainly want to make sure you are educated on the matter, and that you have a plan-of-action for when the OEM does announce those dates. The last thing you want is to be surprised by an EOSL announcement and only have a limited amount of time to respond with critical operational decisions.

LEARN YOUR EOL DATES

Legally, the manufacturer must publish the EOL date for a particular line of hardware as soon as it is determined by the company. Although the OEM is required to post the announcement, it is not required to notify you directly. It's up to you and your IT Team to stay informed and consistently check the manufacturer websites or leverage ITAM tools.

Consider this first announcement as your indicator to begin prepping for a change in maintenance support or procurement initiatives. After EOL is called, EOSL can come months, or even years, later.

Once EOL is announced, you will no longer be able to buy that same hardware from the OEM. Over time your OEM warranty-with-original-purchase will expire, and your maintenance bills will increase dramatically.

Unfortunately, the OEM wields a great deal of the power in these scenarios. As long as you let them dictate your upgrade cycles, that is. it's up to you and your IT team to stay proactive and have alternative plans ready to act upon as needed.

END OF THE OEM LINE WITH EOSL, BUT YOU HAVE OPTIONS

Once the OEM announces EOSL, you have very few options other than to support the hardware through alternative methods or to start the disposition and refresh process.

Before deciding which route to take, consider asking a third-party maintenance (TPM) provider these questions:

- What compliance requirements am I under?
- What are the workload dependencies on this hardware?
    - *What applications will be affected?*
    - *Does it make sense to leave it on the production floor or not?*
- What are our decommission best practices?
- How will we manage data sanitization?
- What is the application and workload migration plan (esp. if you're transitioning to cloud)?

That said, EOSL doesn't have to spell out ITAD for your infrastructure just yet. There are other more strategic options available; namely, third-party maintenance.

THE TRUTH ABOUT OEM UPDATES

When considering a switch to TPM for support contracts, our clients have often expressed initial concern over "losing access" to OEM expertise, services, and (especially) updates and patches.

It's important to note, however, that within the first 3-4 years of a new server, storage, or network hardware release, the OEM works out the majority of the software and security issues with the product. They have solved all of the major bugs, critical errors, and drivers. The OEM has already released and implemented the bulk of the updates, firmware, bug fixes, patches, etc., and any additional updates will be rare in years 4-5.

At this point, the product is extremely stable.

So, even as you pay for the inflated maintenance costs after EOL is announced, you are not guaranteed that you will be getting any updates or patches from the OEM because there is very little need for them at that point in the hardware's lifecycle.[1] Consequently, you'll find that the only Help Desk tickets logged in the past few years and months have been hardware tickets for break-fix concerns.

---

[1]*For example, an IBM Power 770 server went EOL in 2015, and EOSL was called in late 2017; there have been no updates for this hardware since January of 2015.*

Still skeptical? Do some of your own research and see the last time that your OEM sent you a patch, firmware, or microcode update. So, why are you paying the OEM premium for services you're not receiving?

TCO VS. UTILIZATION

CentricsIT TPM experts will meet with your IT team to have tactical meetings over the maintenance status or disposition requirements of your recently-deemed EOSL hardware. Together, we'll objectively and quantitatively determine whether you should extend your maintenance support or update the equipment entirely. We determine this by looking at how well your hardware is utilized in your environments by asking you and establishing:

- How much does it currently cost to operate and maintain?

- How much labor does it require for production?

- How many workloads and applications does it support?

- What is it currently worth in secondary markets?

- What are the compliance and recycling requirements?

Once these questions are answered, we will be able to tell you what it would cost them to keep the hardware on the production floor. Conversely, we'll also be able to tell you what it would cost to decommission and replace it. As a full lifecycle TPM maintenance provider, we have the right solutions for whatever route you deem best for your needs.

More often than not, when the OEM declares EOSL, your IT team isn't yet planning to sunset the hardware—if your environment is stable, and you're happy with the performance of the units, we'll provide high quality maintenance support to enable you to dictate the longevity and utilization of your equipment. If you decide it's time to retire the hardware, we will provide data sanitization services before strategically selling the units with residual market value. For any remaining hardware, we will provide R2-certified recycling services.

STOP LETTING THE OEM DICTATE YOUR REFRESH SCHEDULE

When you blindly follow EOL and EOSL dates, you are in the OEM's pocket. But you do have alternatives. With TPM, you can experience the same level of service for a fraction of the cost.

NOT SURE WHETHER TO DECOMMISSION OR MAINTAIN YOUR HARDWARE AFTER AN EOSL ANNOUNCEMENT?

Speak to a Maintenance Expert at CentricsIT to develop a strategy that supports your assets on your schedule instead of the OEM's.
